

traindee® leash-expander - Instructions

Congratulations on your purchase of the traindee® leash-expander! You have acquired a professional accessory for dog training and we wish you much pleasure for the stress-free training with your friend.

The traindee® leash-expander serves as an aid for dog training in order to eliminate unwanted and stress-induced pulling on the leash by means of consistent and animal welfare training. For the safe handling of this product as well as for a long life span, please observe the following instructions as well as care instructions.

1. Mounting

Ⓐ Attach the carabiner of the traindee® leash-expander to your dog's chest harness assembly. Ⓑ Attach the carabiner of your leash to the ring of the leash-expander.

Reverse Mounting

In special training situations, especially in connection with very long trailing leashes, under some circumstances it is recommended to mount the leash-expander on the man's side, in order to have a better control over the expander. Ⓒ To do this, attach the leash as usual to the breast harness. Ⓓ The traindee® leash-expander can be attached to the holding device (loop) of your leash with the carabiner.

2. Training

The following illustration is intended to illustrate how the traindee® leash-expander works and how it is used best.

① Your dog draws excessively and strongly on the leash, which leads to stress in both animal and man due to painful effects.

② Due to the extensibility of the expander with a progressive increase in resistance, the strong and jerky pull on the leash is eliminated, which can be seen in an immediate absence of the stressors. In combination with a long-drawn-out marker word (e.g., "deeeee"), your dog combines the increasing resistance and the accompanying, gentle slowing of his pulling ambitions.

③ After regular and consistent training, your dog will react to your marker word without the expander, and will terminate its pulling behaviour.

3. Cleaning & Care

If necessary, clean the traindee® leash-expander with a damp cloth. If the expander has become wet, leave it in a suitable place and dry it gently. Never expose the expander directly to a heat source such as radiator or similar. The training-leash is not suitable for use in a dryer.

Note

The traindee® leash-expander is a professional accessory for dog training. Do not use the traindee® leash-expander for ordinary walks with your dog or in daily life as a leash replacement! Due to the functional principle of the traindee® leash-expander, your dog has the possibility to move away a much longer distance from you than it corresponds to the length in the untensioned state!

Safety notes

Before using the traindee® leash-expander, be aware of any damage or excessive wear and tear. Use the traindee® leash-expander only if it is intact!

Always pay attention to your dog and the traindee® leash-expander! Make sure that the traindee® leash-expander does not grind uncontrollably on the floor or stuck anywhere. Please also pay attention to the assembly instructions and the alternative, reverse installation method, especially for very long towing and training leashes and in special training and operation situations!

Note that, depending on the model of the traindee® leash-expander, when fully extended, high tension forces are generated, which are discharged abrupt when being released or detached and can cause serious injuries due to projectile-like flying parts!

Always be advised by your dog trainer about the correct and meaningful-specific application of the traindee® leash-expander for your dog!
